NRG2FLY

We're ready to support your electric aircraft!

The success of your market entry depends on more than just aircraft performance. It requires reliable charging infrastructure at the airports where your customers will operate. NRG2fly is building a European charging network for electric aviation, and we're ready to support you with proven expertise and operational infrastructure.

What we bring to the table?

* Real-world operational experience
  The Netherlands leads globally in electric flight movements. More charging sessions run through our network than anywhere else, helping us navigate this young market.
* We're builing a European Aviation Charging Network
  With 8 operational stations across the Netherlands and Germany, we've tackled diverse airport environments—from flight schools to commercial airfields.
* Future-Proof design
  Our stations serve both aircraft and ground support equipment (GSE), creating viable operations beyond early-stage flight volumes alone.

How NRG2fly can help you?

✓ Infrastructure Consultancy ✓ Turnkey Implementation ✓ Operational Support ✓ Charging Standards Expertise ✓ Energy Hub Development ✓ R&D ✓ Market Access

Meet our Flagship Charging Stations!

E-Flight Academy (EHTE)
The world's first electric flight school, proving the concept in daily training operations

Lelystad Airport (EHLE)
Part of Schiphol Group, demonstrating scalability for major airport operators

BOOK A DEMO!

We'd be happy to show you our charging stations and European network, and discuss how we can support you. **Schedule an online demo with us!**
